

ID	Module	Priority	Scenario Description	Test Type	Preconditions	Test Step	Test Data	Expected to Result	Actual Result	Status	NOTES
TC-LOG-001	Login	High	Verify user can log in using valid email and password	Positive	1. User has a registered and active account 2. User is logged out 3. User navigate to /account/login	1. Enter valid email into Email field 2. Enter valid email into Password field 3. Click sign in button	email: test001@gmail.com password: test123	1. Login is successful 2. User is redirected to homepage or user dashboard 3. No error message displayed	✓ Login successful ✓ User is redirected to homepage ✓ No error message is displayed	PASS	No usability issues observed during successful login flow.
TC-LOG-002	Login	High	Verify system behavior when user attempts to log in using a valid email with an incorrect password	Negative	1. User has a registered and active account 2. User is logged out 3. User navigate to /account/login	1. Enter a valid registered email into email field 2. Enter incorrect password into password field 3. Click sign in button 4. Observe system response	email: test001@gmail.com password: test234	1. Login is not successful 2. Error message is displayed to the user 3. User remains on the login page	✓ Login is not successful ✓ Error message displayed: "Incorrect email or password" ✓ User remains on the login page Email field is cleared Password field is cleared	PASS	Email field is cleared after failed login attempt. This may slightly impact user experience but cannot be classified as a defect without explicit requirements.
TC-LOG-003	Login	High	Verify system behavior when user attempts to log in using an unregistered email address	Negative	1. User is logged out 2. User navigate to /account/login	1. Enter unregistered email into email field 2. Enter any password into password field 3. Click sign in button 4. Observe system response	email: unregistered@gmail.com password: unregistered	1. Login is not successful 2. Error message is displayed to the user 3. User remains on the login page	✓ Login is not successful ✓ Error message displayed: "Incorrect email or password" ✓ User remains on the login page Email field is cleared Password field is cleared	PASS	Login failure behavior is consistent regardless of invalid password or unregistered email.
TC-LOG-004	Login	High	Verify system behavior when user attempts to log in with an empty email field	Negative	1. User is logged out 2. User navigate to /account/login	1. Leave email field empty 2. Enter any password into password field 3. Click sign in button 4. Observe system response	email: empty password: whatever123	1. Login is not successful 2. Error message is displayed to the user 3. User remains on the login page	✓ Login is not successful ✓ Error message displayed: "Incorrect email or password" ✓ User remains on the login page Email field is cleared Password field is cleared	PASS	System displays a generic error message and clears all input fields. This behavior is consistent with other login failure scenarios.
TC-LOG-005	Login	High	Verify system behavior when user attempts to log in with an empty password field	Negative	1. User is logged out 2. User navigate to /account/login	1. Enter a valid email into email field 2. Leave password field empty 3. Click sign in button 4. Observe system response	email: test001@gmail.com password: empty	1. Login is not successful 2. Error message is displayed to the user 3. User remains on the login page	✓ Login is not successful ✓ Error message displayed: "Incorrect email or password" ✓ User remains on the login page Email field is cleared Password field is cleared	PASS	System displays a generic error message and clears all input fields. This behavior is consistent with other login failure scenarios.
TC-LOG-006	Login	High	Verify browser validation for email without @ symbol	Negative	1. User is logged out 2. User navigate to /account/login	1. Enter email: "testgmail.com" (no @) 2. Enter any password 3. Click sign in button 4. Observe validation	email: testgmail.com	1. Browser tooltip: "Please include '@' in email address" 2. Form submission blocked 3. Email field NOT cleared 4. Password field NOT cleared	✓ Tooltip shown correctly ✓ Submission blocked ✓ Fields retained	PASS	Validation is performed directly by the browser using HTML5 mechanisms. If any input is invalid, the submission process is stopped before the request is sent to the server.
TC-LOG-007	Login	High	Verify browser validation for email with incomplete domain	Negative	1. User is logged out 2. User navigate to /account/login	1. Enter email: "test@" 2. Enter any password 3. Click sign in button 4. Observe validation	email: test@	1. Browser tooltip: "Please enter a part following '@'" 2. Form submission blocked 3. Email field NOT cleared 4. Password field NOT cleared	✓ Tooltip shown correctly ✓ Submission blocked ✓ Fields retained	PASS	Browser-level validation prevents form submission due to incomplete email structure. Validation behavior and field retention are consistent with TC-LOG-006.
TC-LOG-008	Login	High	Verify application validation for malformed email domain	Negative	1. User is logged out 2. User navigate to /account/login	1. Enter email: "test@.com" 2. Enter any password 3. Click SIGN IN 4. Observe validation	email: test@.com	1. Error message: "Incorrect email or password" 2. Email field RETAINED for correction 3. Password field cleared (security) 4. User can see their mistake	✗ Both fields cleared ✗ User must re-enter everything ✗ Inconsistent with TC-LOG-006, TC-LOG-007 the system clears both email and password fields on error. This creates inconsistent user experience across validation layers and is logged separately as a UX improvement.	FAIL	Validation is handled by the application after form submission. Unlike browser-level validation (TC-LOG-006, TC-LOG-007), the system clears both email and password fields on error. This creates inconsistent user experience across validation layers and is logged separately as a UX improvement.
